1. Design

Project Focus:

- minimalistic design
- efficiency and easy navigation
- maximum contrast and recognizability
- minimal discomfort for elderly users 45+
- maximum use of space and large elements.
- UI that does not hinder visually impaired people.

2. Research

Significant bugs and "wrong solutions" in all products in the market.

1.1. McDonald's

1.1.1. The logo is a "home" button that works one time

1.1.2. Navigation is not clear and is insufficient at specific times. There is no "Back" everywhere, which creates difficulties and may cause to start over. It is not clear that the logo is "home".

1.1.3. At least 3 steps can be removed from the software without problems. Example: instead of a "checkout" button and a step to choose between "cash" and "card", there can be two checkout buttons: "cash" and "card".

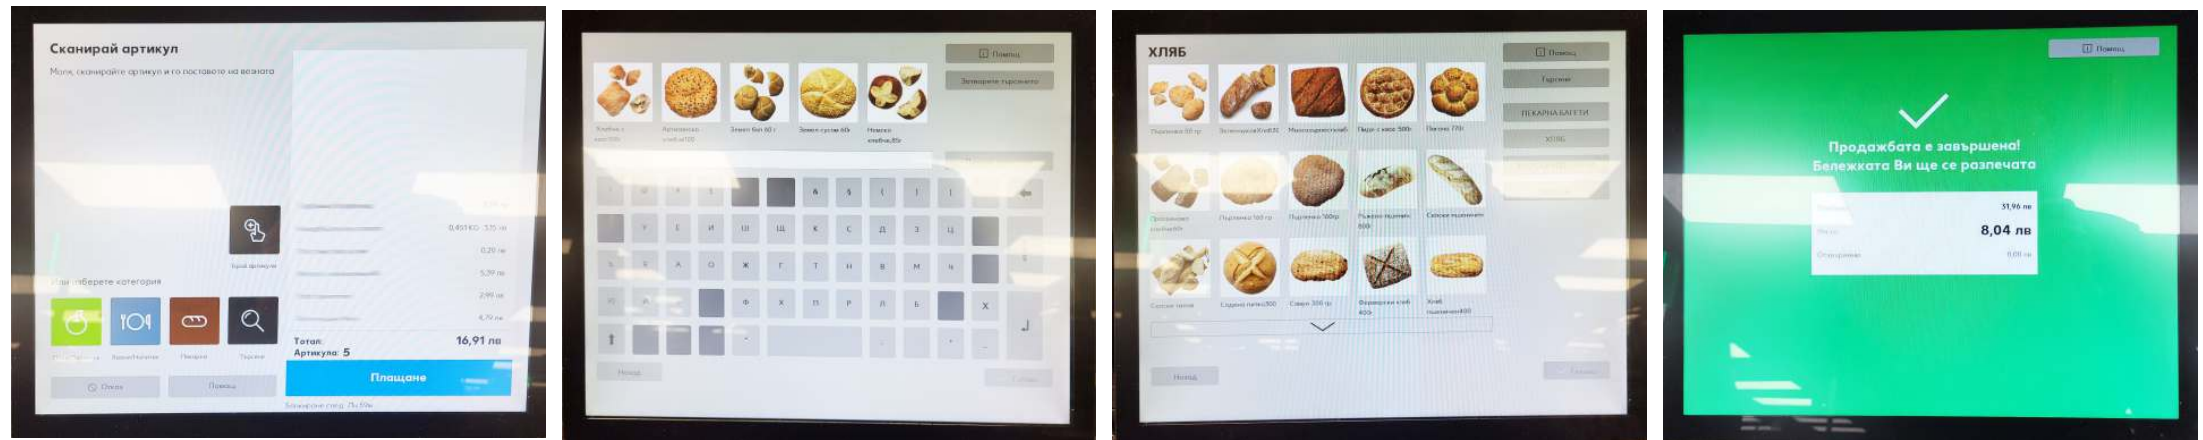

1.1.4. The "rotating" menu on the left is obviously not convenient and only takes up space. It is used in isolated cases by children to play. The user wastes a lot of time to achieve the desired results. The different position of the elements requires a lot of adaptation time and above all, the user cannot have a clear idea of the number of product categories.

(Billa software has a similar problem)

1.1.5. It would be convenient to add a checkout method to the first step and to pre-select the most frequently selected: language; payment method; order type (same for all restaurants even if there are differences). This way regular user will press "next" without additional operations. At worst scenario - there will be 4 operations as it is now.

1.1.6. The last step besides a list of products should have a "payment method" and "order type" that can be changed in need.

2. Kaufland

- 2.2.1. The photos - extremely poor quality.
- 2.2.2. The content is not distributed properly and more than 5% of the screen area is wasted.
- 2.2.3. There should be an option to enlarge the content
- 2.2.4. Text on a gray background has very low contrast.
- 2.2.6. Dark gray buttons with dashed text are not acceptable
- 2.2.7. Spaces between elements are not optimized. Reducing the spacing will allow for more products in the sheets and/or larger fonts to be used
- 2.2.8. The icons on menu 1, on the left, are only 5. In this case, there may be a much different and more convenient menu that will eliminate extra steps.

- 2.2.9. Payment can be made with two buttons - "cash" and "card"
- 2.2.10. "Scan product" and the bottom line is "please scan item". One is redundant.
- 2.2.11. Different styles of navigation elements are observed which is not correct
- 2.2.12. There is no option to change languages

... and many others!

3. Billa

- 3.3.1. "Welcome" may not be on a separate page. Would be better a menu that allows start using the software right away - removing one step
- 3.3.2. "Languages" button takes too much space and it has an ugly design. A small standard button is more correct, bearing in mind that 90-99% of customers are local residents.
- 3.3.3. In the right side of example 2 and 3 (the main menu) - only "scale" is not superfluous. "last product" is in the list on the left, and "please scan" can be it in the empty list of products.
- 3.3.4. The freed up space will allow all product categories to be displayed
- 3.3.4. scanned product in "List of products" (example 6 and 7) - red

- background with black text is absolutely unacceptable.
- 3.3.5. Item list should be full screen - currently losing 5%.
- 3.3.6. In the "list of products" bar on the top could be place "x" to close. As well "Magnifier" for search, "favorites", "favorites from yesterday". This will allow all products in the list to increase by ~17%
- 3.3.7. 90% of the texts are in capital letters. Besides being ugly, it is considered this makes letters more difficult to recognize and reduce the readability of the text. It is characterized with "shouting", which looks extremely amateurish on the background of at least 5 different design styles.

3. Innovation

1. 3 steps removed. No waste of time and effort

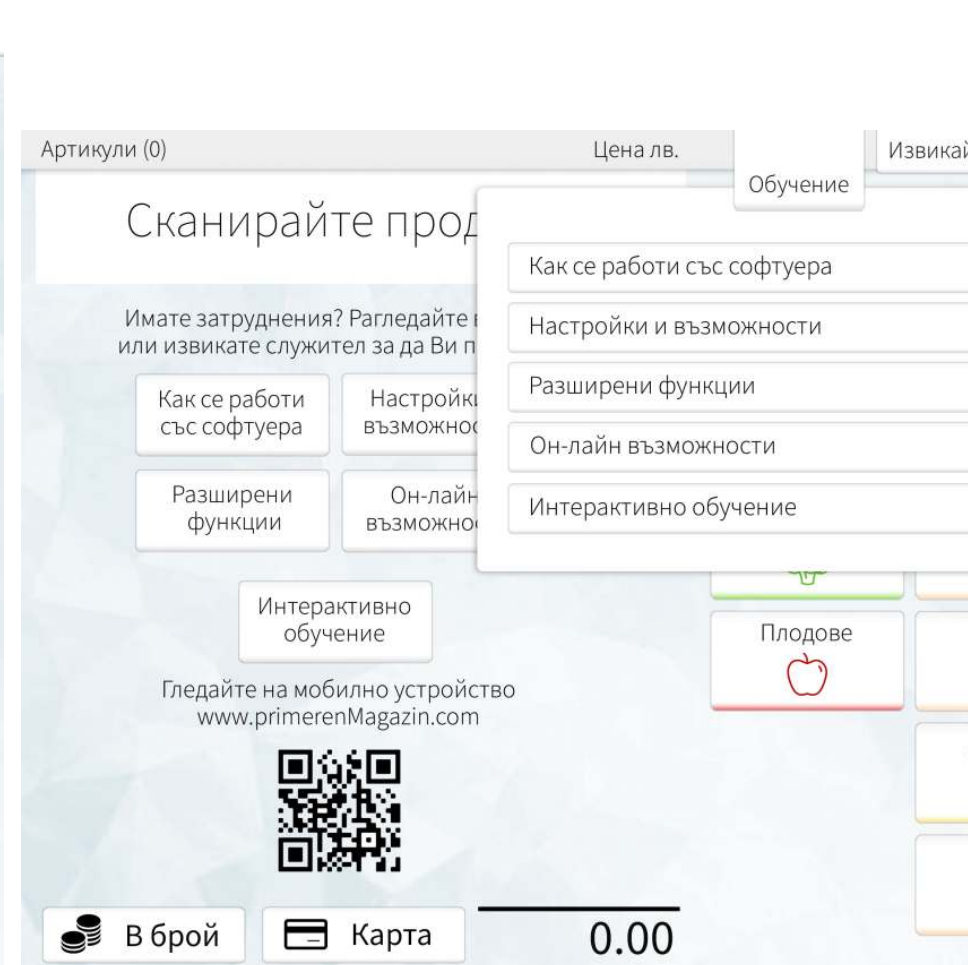

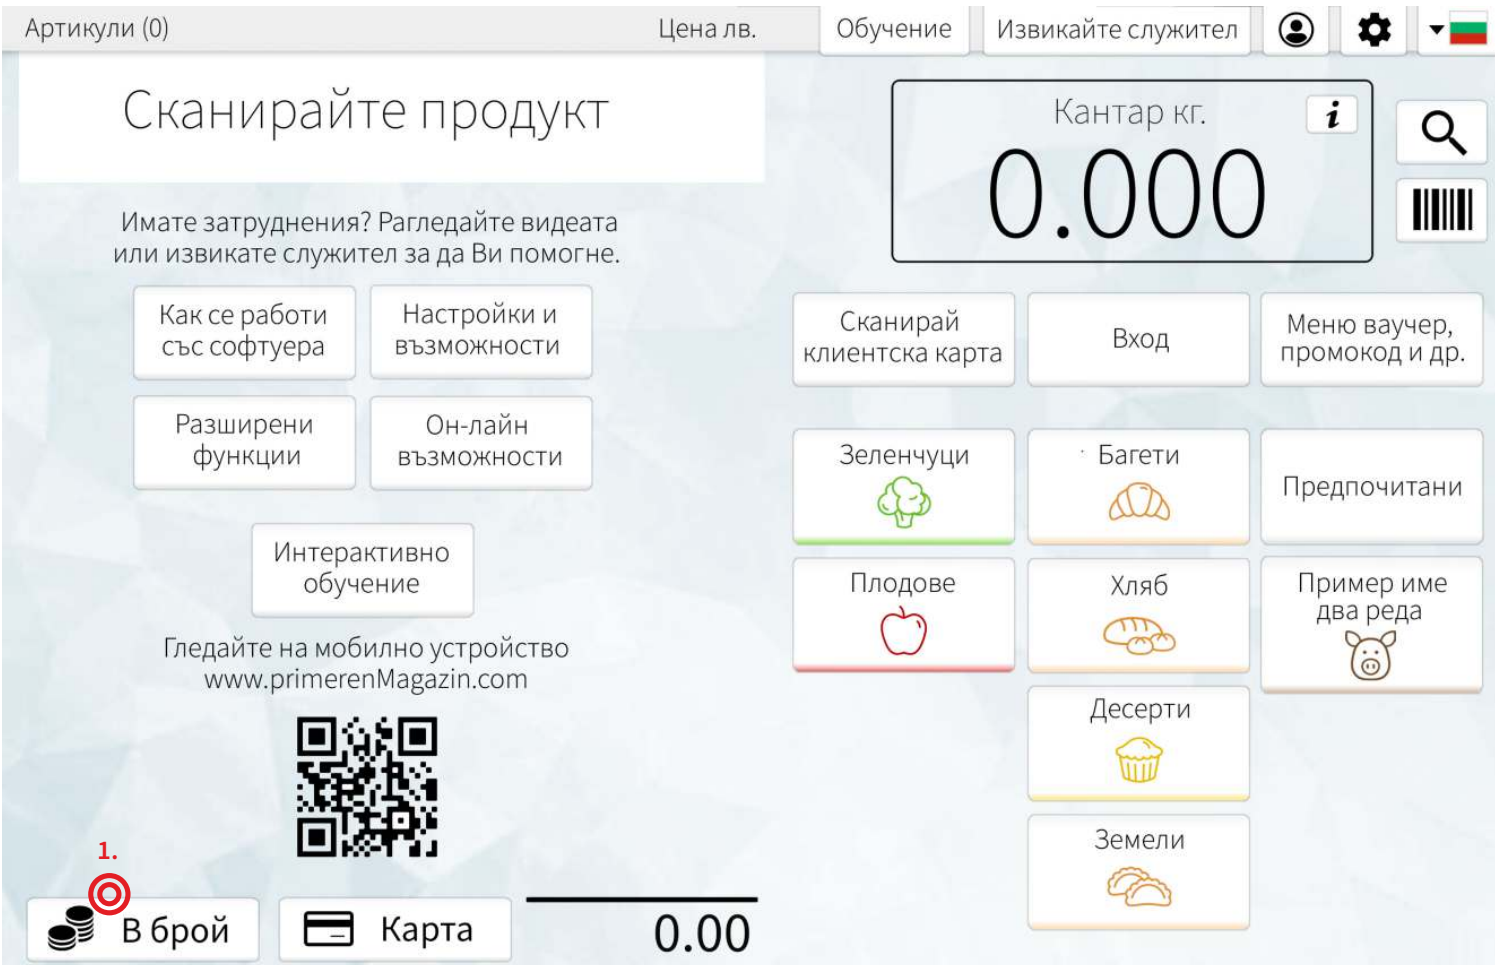

No “press to start” or “choose language”. Program is ready with the most common settings. Language can be changed from the button “languages” (very rarely used)

Removed “payment method” step with separate buttons for checkout - “cash” and “card”

2. Tutorials and Interactive learning

Home menu before scanning a product have tutorial buttons. After scanning a product the left side becomes the standard list. The videos are available in the header - "training".

Interactive Training: user have to work with the program and complete specific tasks.

3. Profile. Application. Card

3.1. Through a card or mobile device, user is recognized.

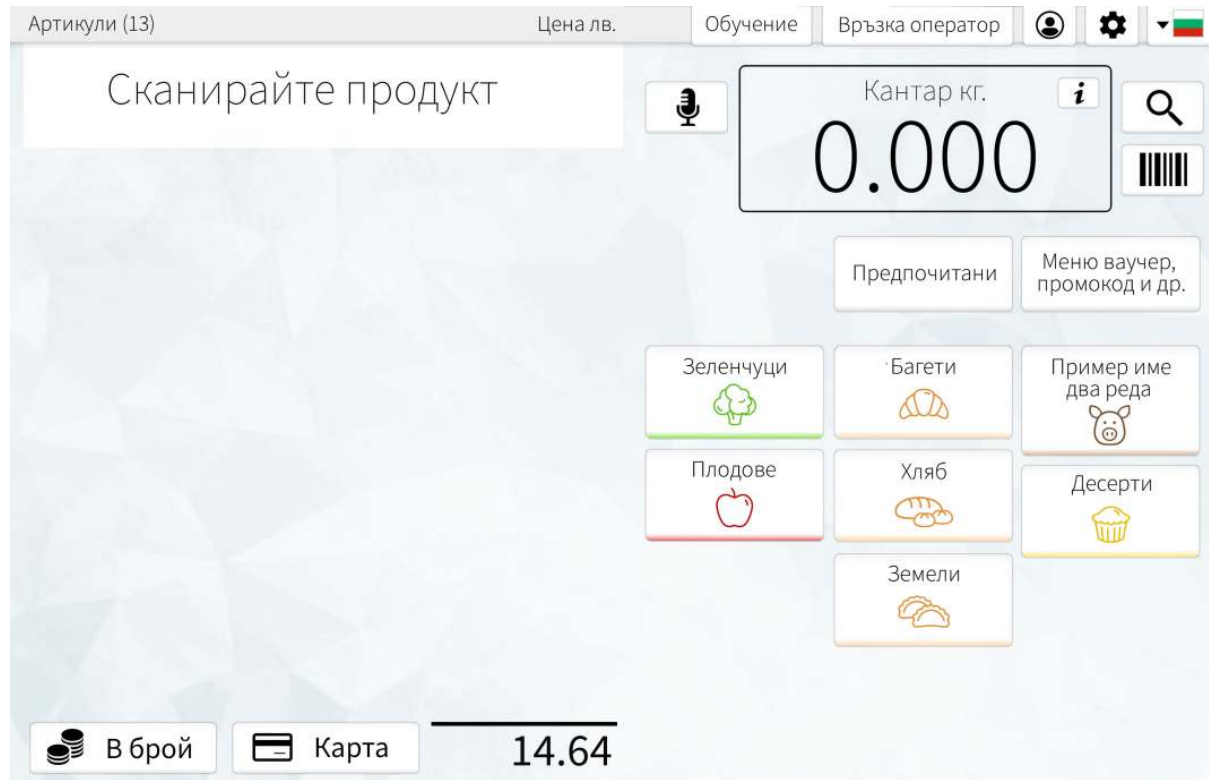

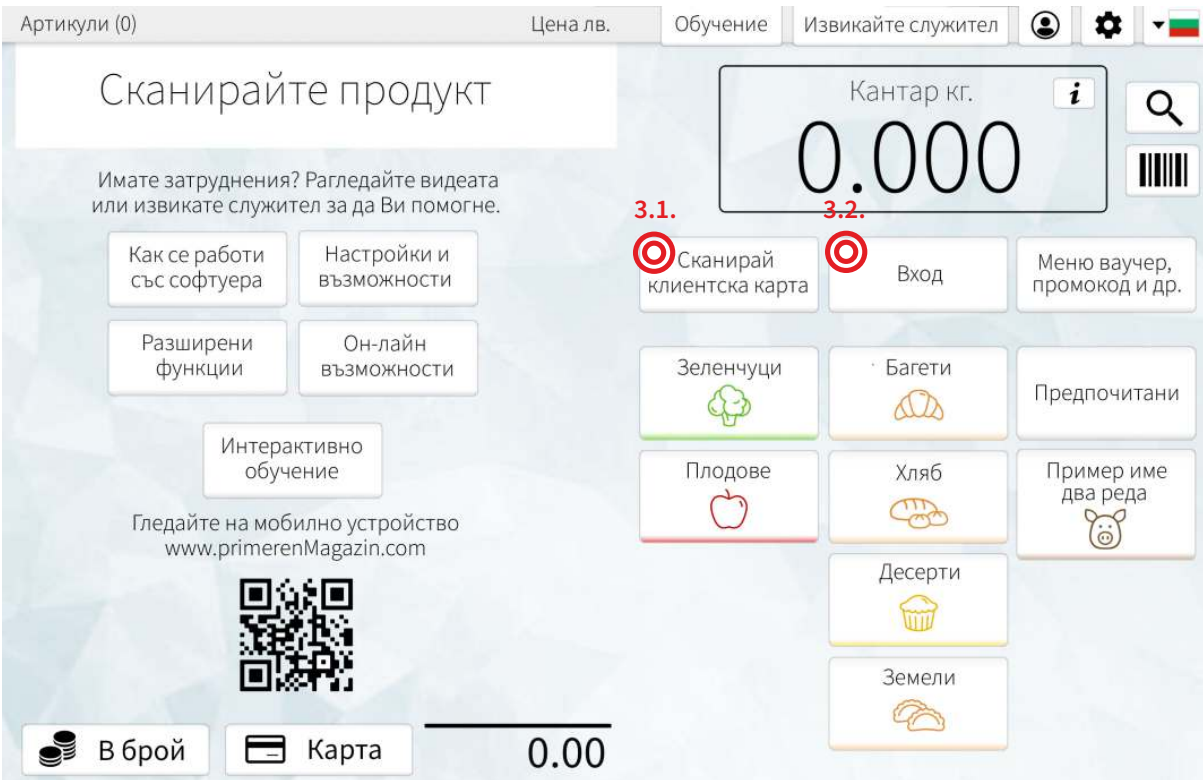

3.2. Possibility of login with "user name" and "password" - in case of: forgotten/lost card or mobile device; no battery; damaged/lost card

3.3. After successful login - design changes according to user settings.

There is an option for the card / QR (or barcode) from the application to be automatically recognized when scanning, making the standard button "scan card" redundant.

The functions we include in the user profile are useful not only to the user - they provide a lot of statistical information.

Standard home screen design:

4. System messages

Personal messages focused on service improvement. Introducing new features. **Example:** if adult users are offered to increase the size of the content, they will work more easily and faster.

5. Advertisements

Small shops will take the advantage to earn by promoting a brand.

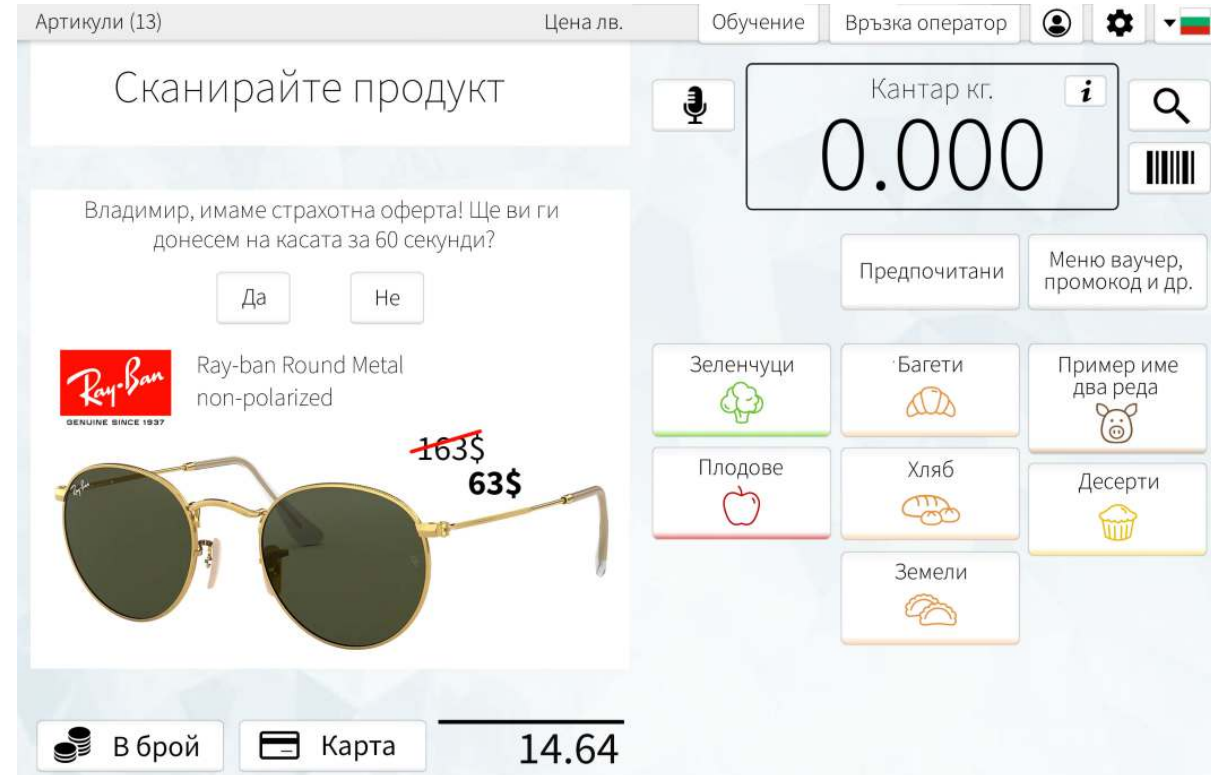

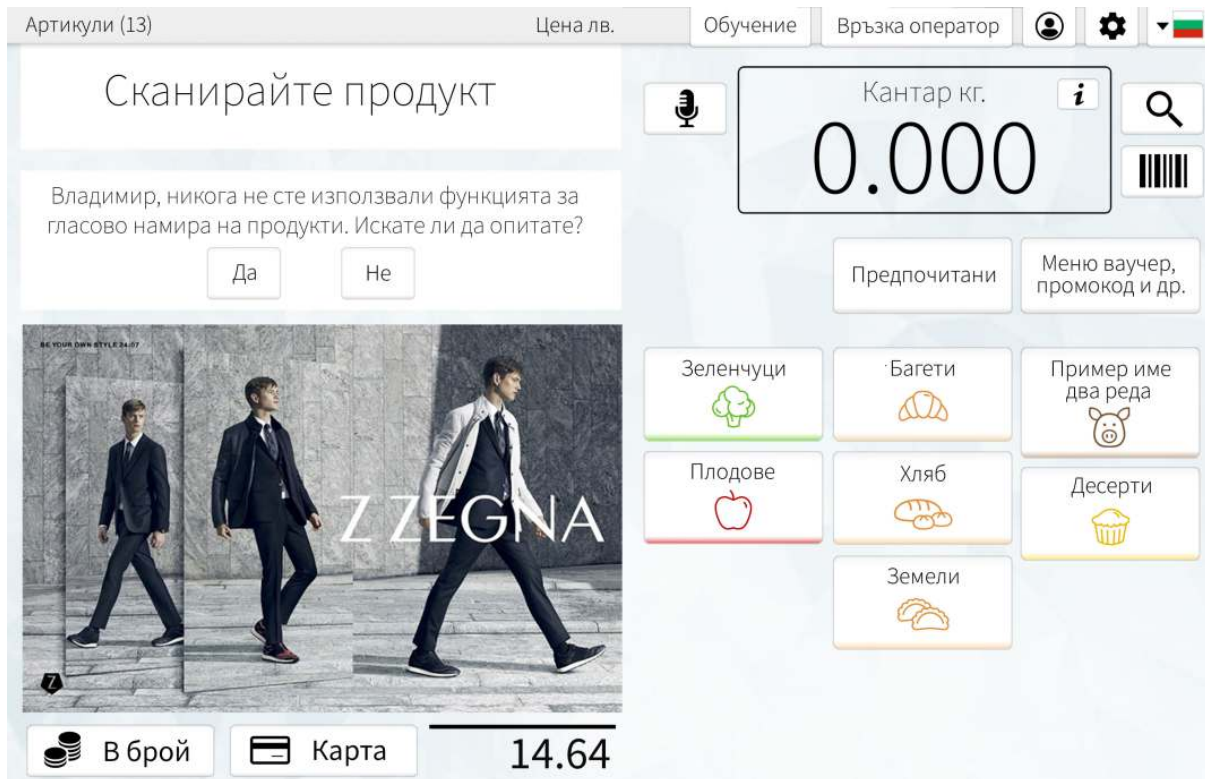

5.1. Option 1: brands can provide software to stores for free that is pre-branded, which is an opportunity to take a large share of the market.

5.2. Option 2: A cheaper version of the program that runs ads at different stages

5. Upsales

It is used to increase sales in online stores. “do want this great promotion? We will bring it to you in 60 sec.?”.

It would work great if the products are near by.

6. Settings

6.1. Increases font and buttons

6.2. Theme settings

6.3. Black- white theme for the visually impaired

6.4. Voice assistant. It helps in all stages of the purchase.

Voice activated operations are turned on.

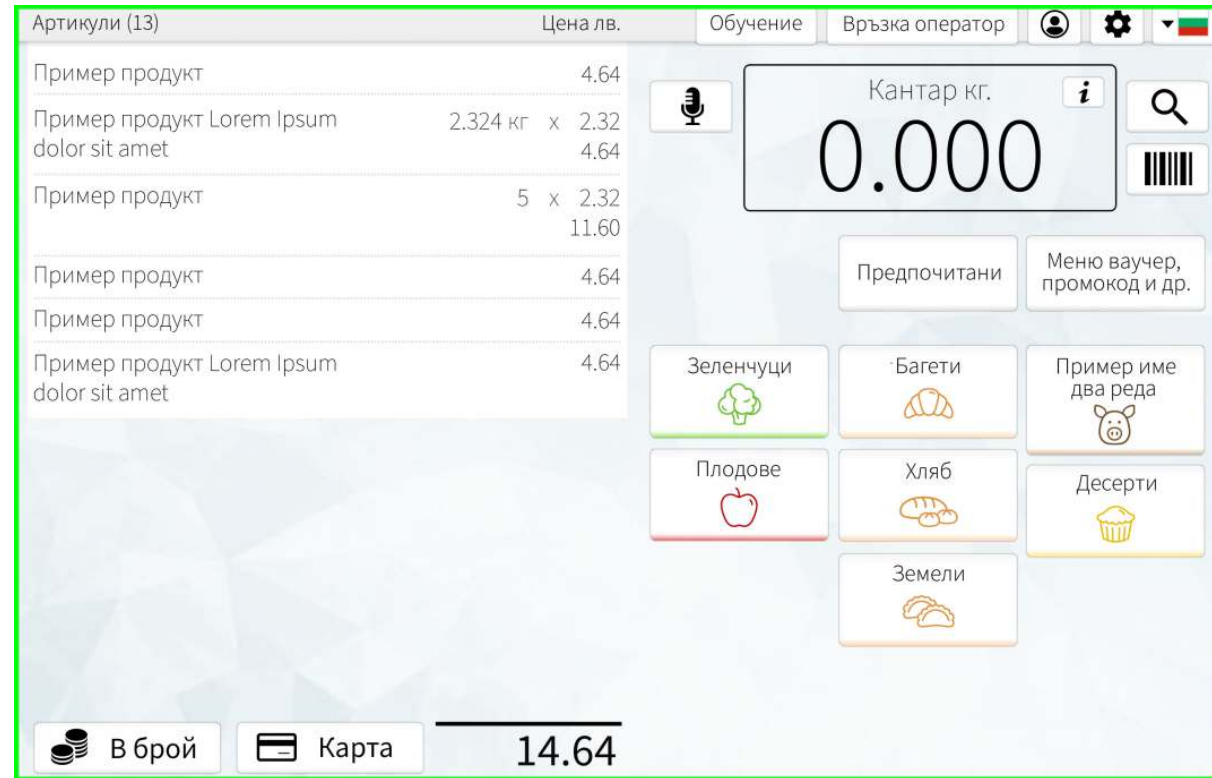

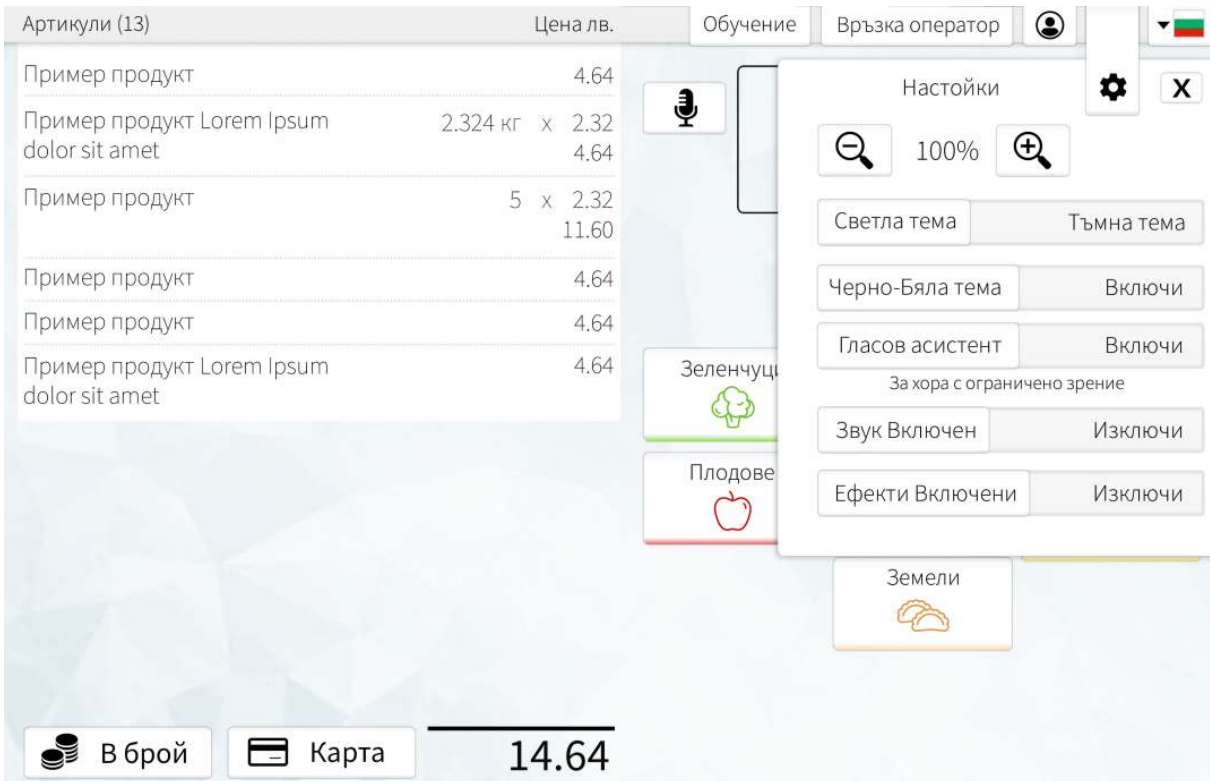

6.5. Sound. This option mutes the voice assistant that is active.

Reduces or turns off various sounds when working with the software.

6.6. Animations and effects removed. This includes effects for ease of use with the software

7. Effects improving work

Example: after a successful scan of a product, an outline appears for 0.6-1.0 seconds. (in noisy area of dozens of cash registers and sounds - this will help).

8. Improving security (example)

Feature that help employees monitor - writing the product name, that has been scanned for 1 second.

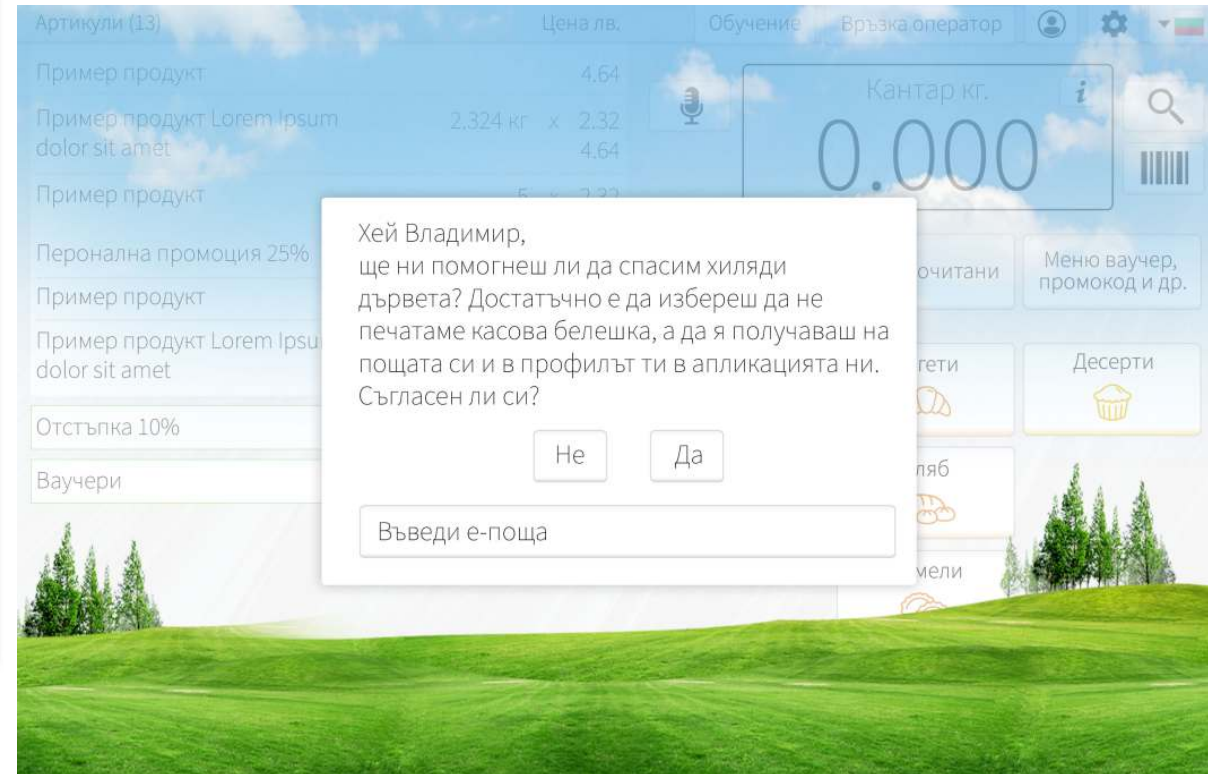

9. Questionnaire, advertising, feedback, etc.

Software function query to all users which will have a strong effect.

Example: "Action to take care of nature"

1. Before completing an order, a beautiful menu opens.
2. The user is invited to enter an e-mail and to do the necessary so that notes are not printed.
3. If he refuses, he is informed that he can always make a change in the "settings" menu.

10. Profile

Saved Settings. When user is recognized from the system (in any store chain) his profile settings are activated.

One card and one profile for many stores, which is extremely convenient.

Profile menu contains:

- list of personal promotions, discounts, etc.
- personal settings (e-mail, security, etc.)
- a list of shops to which the card is active
- order history + receipts. Extremely useful for a claim. Allows to remove paper printing.
- List of points to various stores
- Vouchers menu. Easy import, activate, deactivate.
- Electronic vouchers - vouchers can be imported by the employer into the profile, and it is not necessary to give the voucher on paper.
- various profile settings

11. Personal Promotions

Email to client: "you haven't come for a long time! 50% off chocolate' (customer's favorite). "Activate your bonus on purchase."

This is a whole new realm and opportunity for stores.

12. No receipts

With the consent and by initiative of the client - receipts are sent by email and not printed. They are saved in the system and available in the client's profile.

Once **"Completion of the order"** is activated for client card or application on a mobile device - client can use them to leave the store (if there are restrictions). **Advantages:**

- + No wait for a note to be printed
- + Environmentally friendly
- + Client will save operations to hold the receipt, search for a trash can and throwing it away
- + Less trash in the store
- + Reduces paper roll costs
- + Less frequent roll change

The screenshot shows a POS system interface. On the left, a receipt is displayed with the following items:

Артикули (13)	Цена лв.
Пример продукт	4.64
Пример продукт Lorem Ipsum dolor sit amet	2.324 кг x 2.32 = 4.64
Пример продукт	5 x 2.32 = 11.60
Перонална промоция 25%	- 2.40
Пример продукт	4.64
Пример продукт Lorem Ipsum dolor sit amet	4.64
Отстъпка 10%	-6.55
Ваучери	-20.00

At the bottom of the receipt, there are two payment options: "В брой" (Cash) and "Карта" (Card), with a total amount of 14.64. On the right side, a profile management menu is open, showing the user's name "Владимир Димитров", email "vladimir@mymail.com", and a phone number "0888 222 888". The menu also includes options for "Управление на профил", "Смени парола", "Ваучери, промокодове, отстъпки", "Точки карта. Оферти", and "Касови бележки". There are two checkboxes: one checked for "Не искам разпечатка на касова бележка. Да се изпраща на е-поща" and one unchecked for "Съгласен съм да получавам информация за оферти".

13. Menu vouchers, promo codes, discounts.

- + allows inserting and removing vouchers. (Electronic vouchers cannot be removed).
- + enable and disable vouchers to reach desired amount
- + “total” allowing the customer to correctly combine the vouchers.
- + history of vouchers
- + view promotions
- + activation of promo codes
- + in the case of a stolen voucher, there is a possibility to find a user with a corresponding voucher. Date and time of activation...

14. Automatic deposit of vouchers

When scanning a voucher it is automatically added. No additional operations are required. Since the voucher has a different number of digits there should be no conflict with products.

Voucher activated message: disappears after 1.5-2 seconds. First times user will need to press "ok" to close - the purpose is to read that the voucher is activated and that user can deactivate it very easy.

14.64

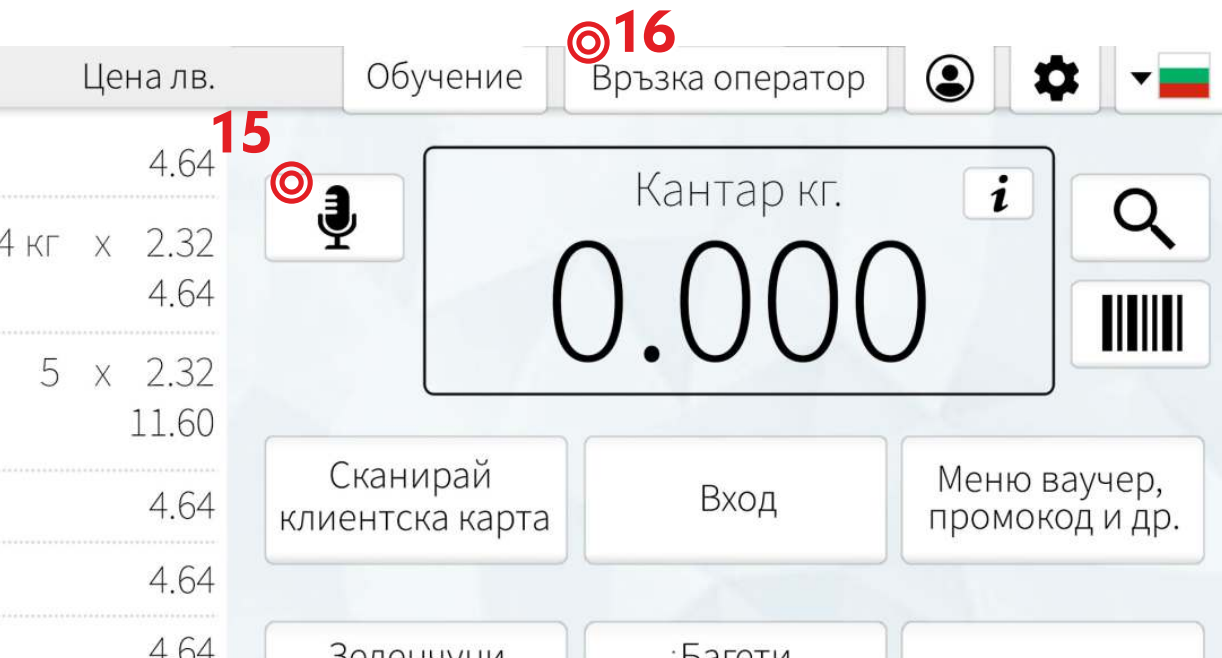

15. Voice Activation

In case the cash register has a microphone. "Push of a button" - user say the product name and don't need to search in menus. In case the program has difficulty recognizing the product the customer is looking for, it will open a "search" menu and load all similar products.

16. Connection with operator

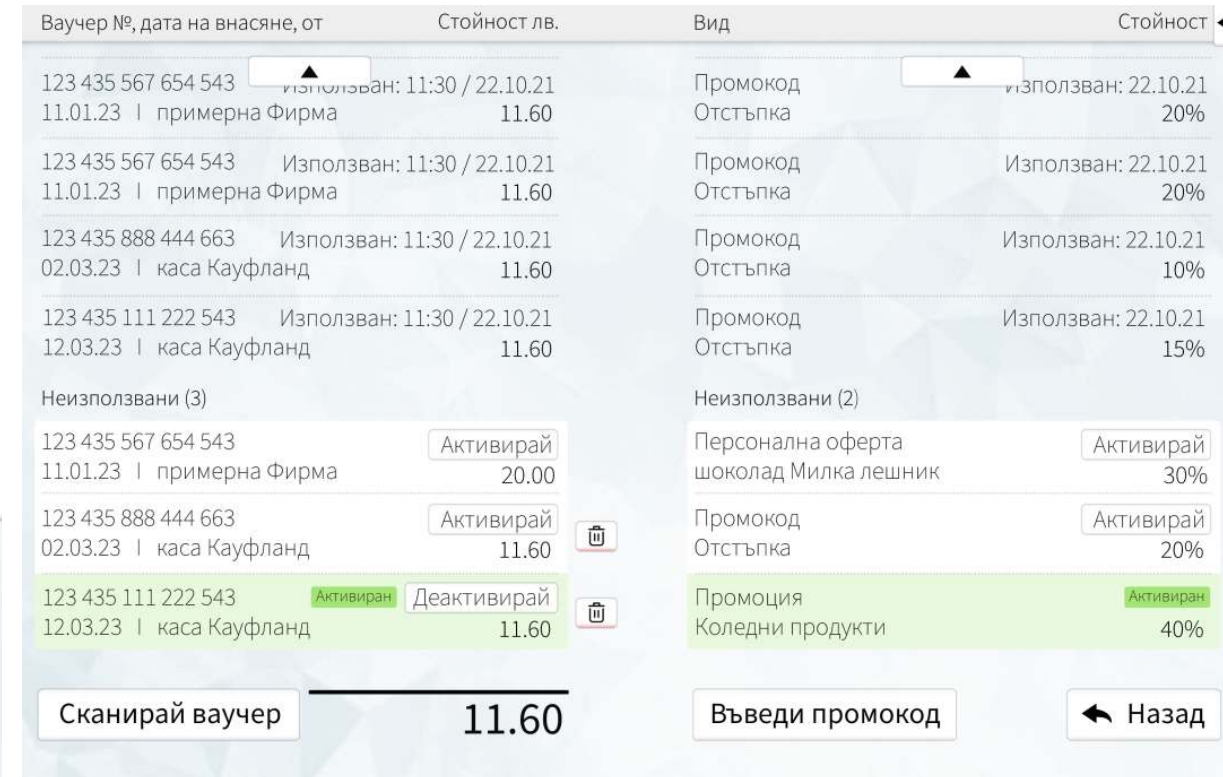

Removes waiting time and need for special employee to assist. Thanks to this function employee will immediately be able to assist. If needed to come, employee will give information when.

This is significantly better than the existing solutions - user press a button and hope someone sees the signal in on (which does not happen and there is a long wait). Available solutions do not provide information when someone will cooperate, which is not acceptable.

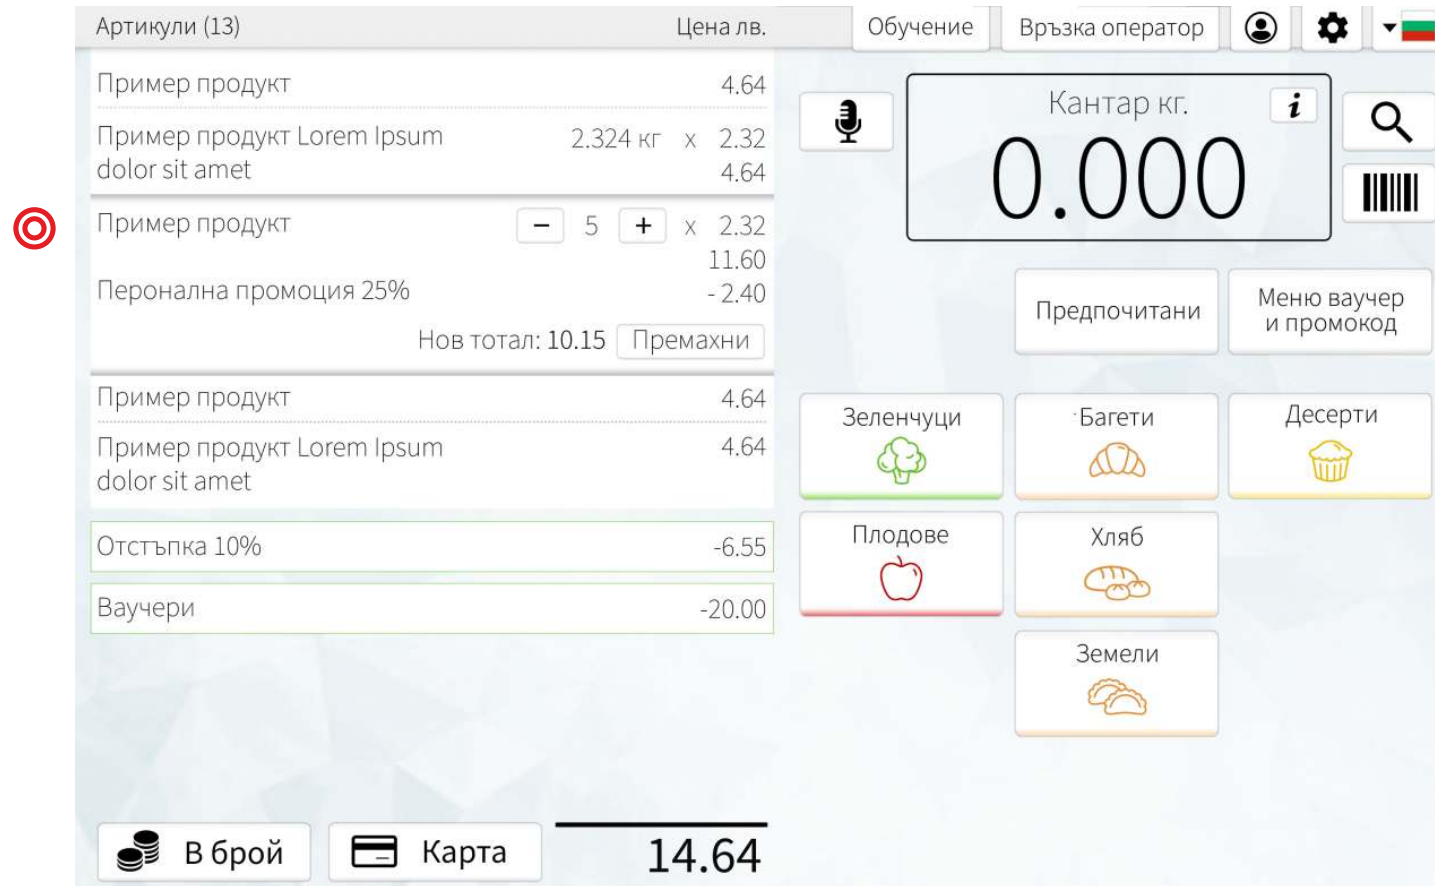

17. Easy navigation + gesture integration

1. Internal menus have two back buttons. One is very small in the upper right corner. In fact, the entire header works as a "back" button (this information is available in the tutorial videos).
 2. swipe left - activates "back function"
 3. two fingers - zoom
- ... etc.

18. List Product Activation

"Double-click" / "Press and hold" on a product in the product list triggers editing options.

19. Easy removal

From a security point of view, large chains would turn it off, but in many cases it is mandatory - diners, bars, restaurants, where the software will be used for ordering

Option - when removing products, software alert employees to check at the end or during the order that everything is OK.

Information total after removal - convenience for customers who fit into a specific budget. Adaptive for vouchers as well, showing total after removal.

20. Optimized barcode search

Results are displayed after 3 digits entered. Barcode search shows all products having the specific sequence of digits.

21. Indexed Results

The results displayed are ordered by an "index" based on the number of times the product was selected after a search. This way products with poor quality labels will come out first

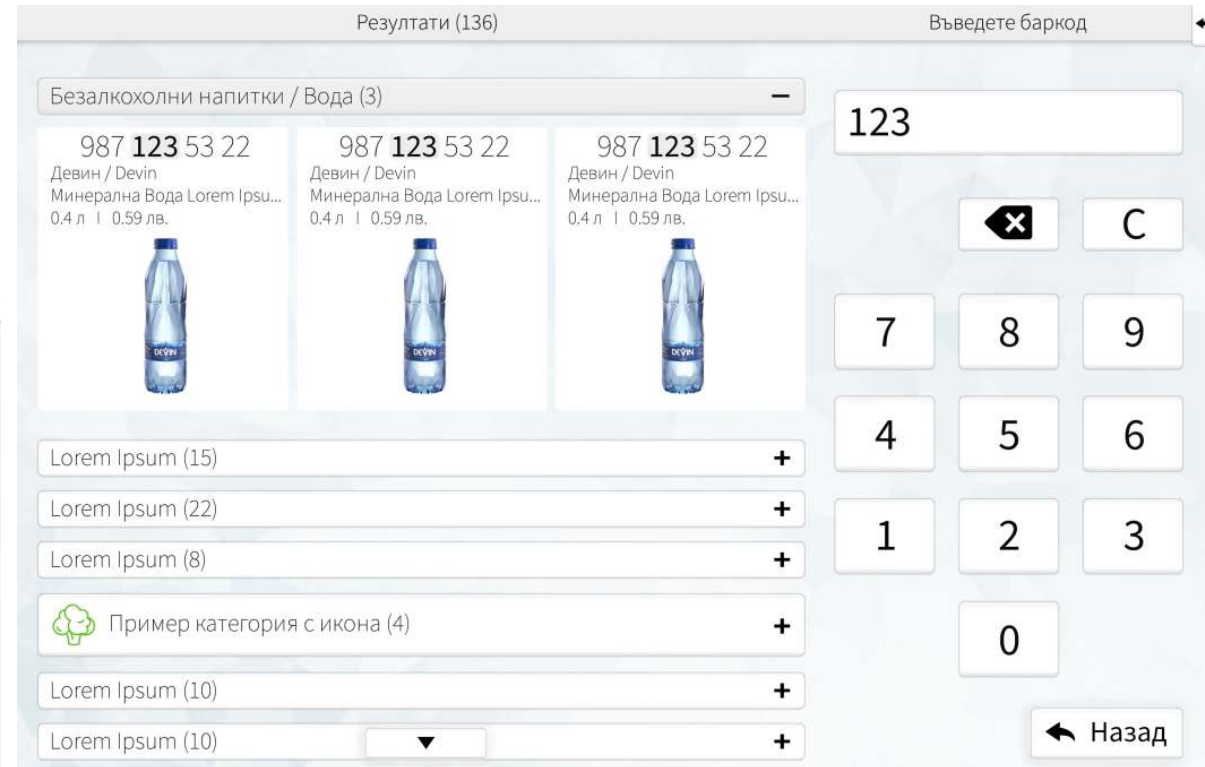

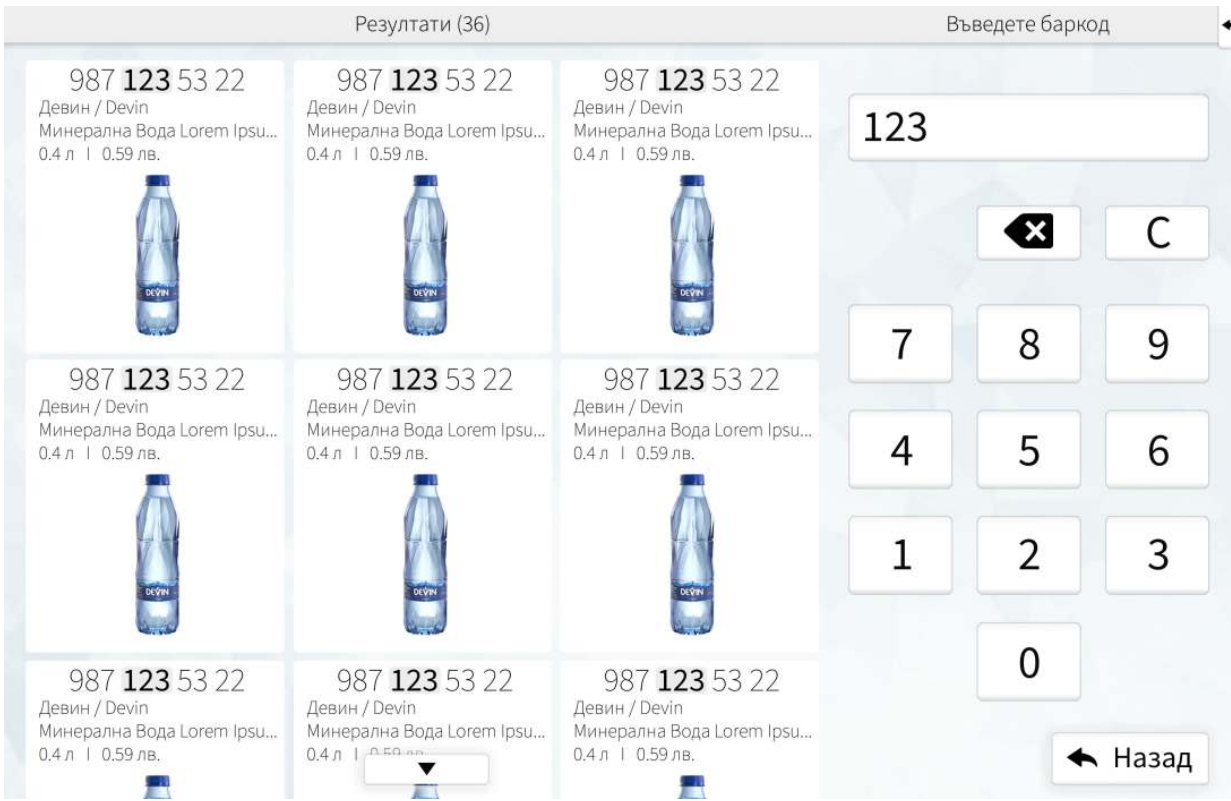

22. Search + photos

Makes searching for products easier. Adaptable for stores that also have an online store, as well as for stores with few products, restaurants, etc. Linking a web page and software to a common database is a must anyway.

23. Categories in case of multiple results

When the results are more than 12-20, they are grouped according to their categories (tags) in the database.

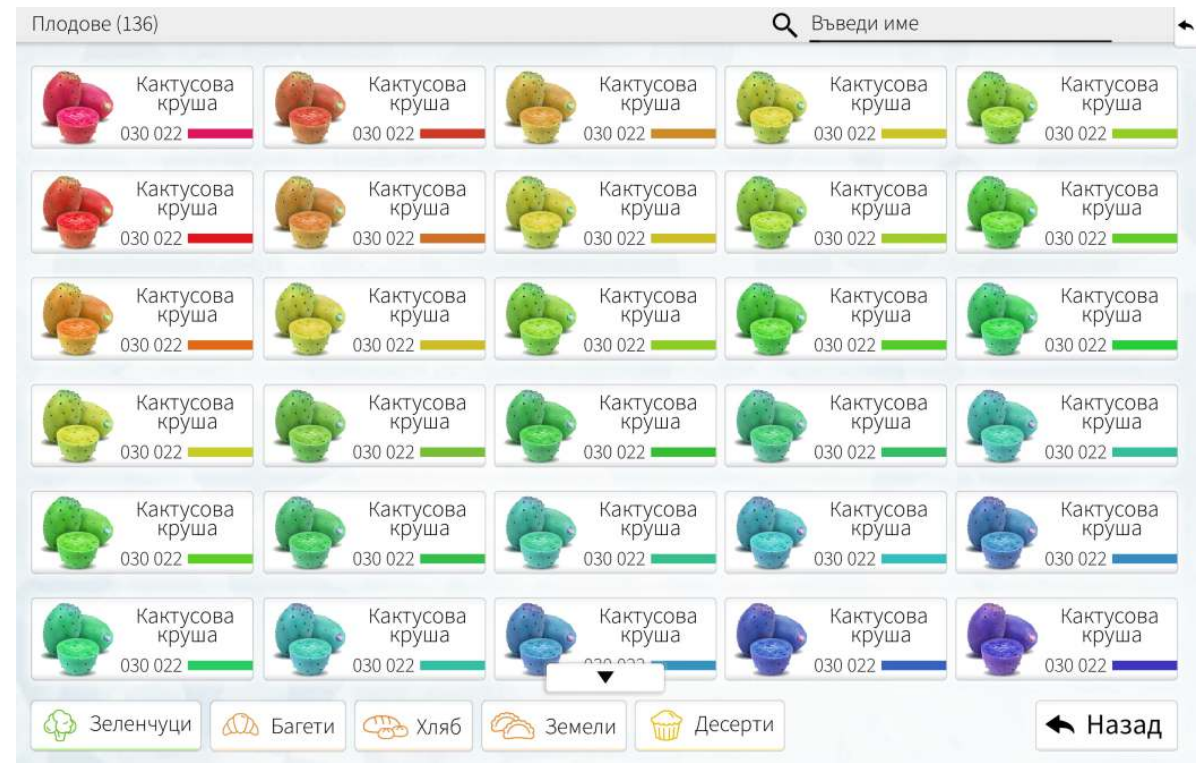

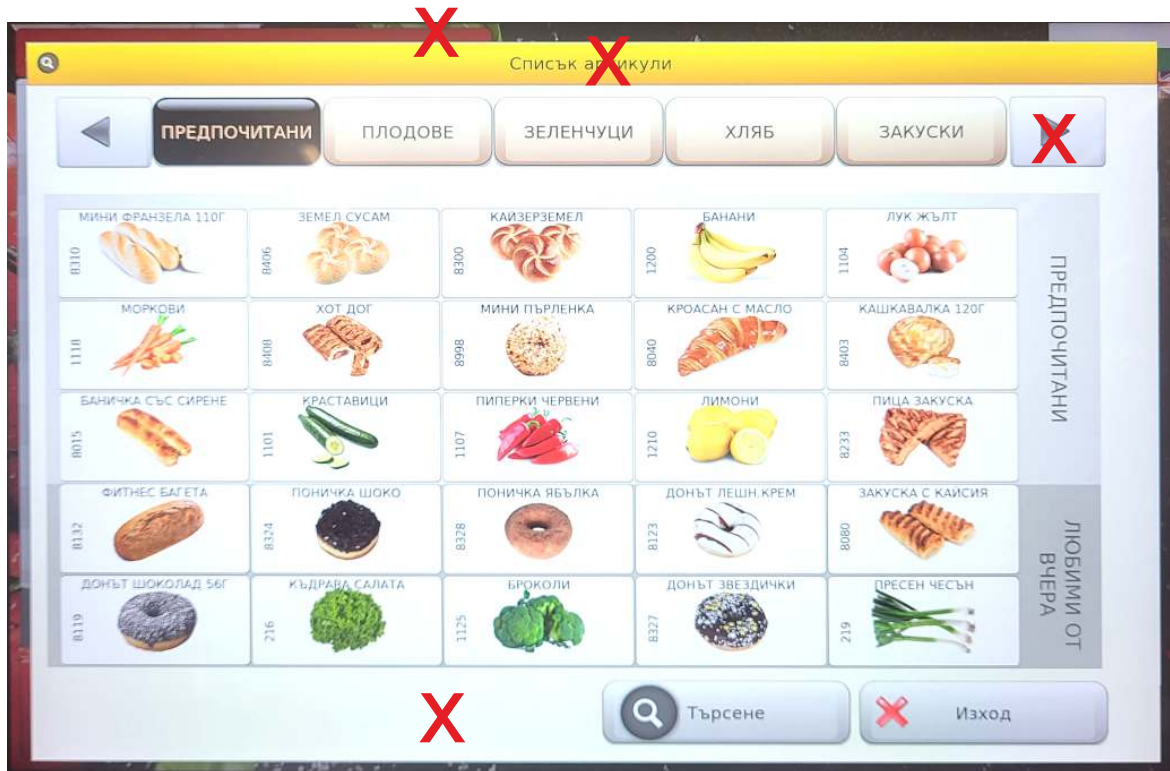

Product information and photos will be loaded after opening the group - these features are mostly informative and will be used very rarely.

"Billa" variant.

We found many bugs in the competing product:

- Arrows with categories is probably the worst solution.
- Code and buttons rotated at 90 degrees, which is unacceptable
- Favorites and favorites from yesterday takes up a lot of space
- Capitalized everywhere except where necessary (navigation)

Our variant allowing more categories and large photos.

25. Zoom Design

Options for choosing the distribution and sizes of elements when zooming. The different zooms are predefined (Zoom 1; 2; 3; 4, etc.). They change the style of: buttons and distribution; dimensions; content; icon size; remove icons; text size, font characteristics, etc.

26. Information Scale

Complete information about the scale. Instructions and other useful information.

27. Left-handed / Right-handed

An innovative adjustment feature that changes the distribution for maximum user convenience. The concept is applicable to a start menu; search; content internal menus (vouchers, points, receipts); navigation; functions etc.
